The global Off-Phase Closed Busbar market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The isolated-phase closed busbar is a device for power transmission and distribution, usually used in medium and low voltage power systems. It consists of multiple copper bars, which are isolated by insulating materials to form a closed circuit. The phase-isolated closed busbar can effectively prevent the occurrence of arc and short circuit faults, and improve the reliability and safety of the power system. It is usually used in power systems in buildings, factories, machine rooms, ships, mines, etc. It can withstand large current loads, and has the characteristics of easy installation, compact structure, and small footprint. It is an important power transmission equipment widely used in various industrial and civil fields.
