Abstracts

OTR Tires (Off-the-road tires) are utilized for large-scale machinery at construction and mining and other sites with no roads. These tires mainly made with premium casings and durable compounds. Off-the-road tires offer substantial support for machinery used at various civil engineering sites, including ultra-large dump trucks, earth and gravel at mining and dam construction sites, bulldozers for earth removal and graders for road construction and snow removal.

Scope of the Report:

This report focuses on the Off-The-Road Tyre in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The production and sales volume of OTR tires is directly affected by downstream industries and global economy. Over the past six years, the market of construction and mining equipment has experienced fast growth and decline, as well as the OTR Tires market. The demand of OTR Tires reached a peak in 2013, just as what the construction and mining equipment industry experienced. And over the past two years, the OTR tires industry has faced decline which seems almost hard to bear for related enterprises.

As the global economy growth rate is forecasted to slow down, especially in China, which is one of the largest markets of OTR Tires; the market of OTR Tires in the following five years seems will not enjoy that fast growth. But as the market in India, Africa and some other developing regions is also promising, the industry of OTR tires is forecasted to recovery after 2016, though it will not grow as fast as what happens before 2013.

The worldwide market for Off-The-Road Tyre is expected to grow at a CAGR of roughly 3.6% over the next five years, will reach 14500 million US\$ in 2023, from 11800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
