Abstracts

Engineered gearbox and drives are customized/tailor made as per end-user requirements and specifications. They are either manufactured by modifying the components of standard off-the-shelf gearbox and drives or designed and built from scratch. Gearboxes are an important component of wind turbines as they are used for connecting the low-speed shaft to the high-speed shaft and increasing the rotation speed.

SCOPE OF THE REPORT:

This report focuses on the Off-the-shelf Gearbox and Drives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. New annual installations rely on the annual installed capacity of wind turbines, whereas replacement installations depend on the annual installed capacity of wind turbines that are already in existence. The upsurge in demand for power and the stress on clean energy generation have resulted in further spending on wind energy generation.

The worldwide market for Off-the-shelf Gearbox and Drives is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
