Abstracts

The global Offshore Fire Protection Service market size is expected to reach \$ 2653 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

To address the challenges of fighting fires at sea, the shortage of specialized rescue forces, and the need for rapid response in hazardous marine environments, maritime fire fighting services have emerged. Since the rapid development of modern shipping and marine resource development, maritime fire fighting services have evolved from an auxiliary function dependent on port fire services to a comprehensive rescue system encompassing dedicated fire fighting vessels, aerial fire fighting support, offshore platform fire fighting systems, and professional maritime fire fighting teams. Currently, this service has formed a professional field covering various scenarios such as deep-sea, coastal, and port areas, integrating prevention, monitoring, emergency fire fighting, and post-fire management. It is widely used in fire protection and emergency rescue for merchant ships, oil tankers, offshore drilling platforms, port facilities, and coastal energy bases, significantly improving maritime fire control capabilities and the safety of lives and property at sea.

The maritime fire fighting service market is benefiting from the national strategy of becoming a maritime power, the green shipping transformation, and the expansion of energy projects, showing a trend of large-scale and intelligent development. In the future, it is necessary to overcome critical technological bottlenecks, strengthen the ability to respond to extreme scenarios, and deepen collaborative mechanisms to support the high-quality development of the marine economy and the protection of life and property.
