Abstracts

The global Offshore Wind Turbine Blade market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Offshore Wind Turbine Blade is the core component of offshore wind turbine tower. Offshore wind power is one of the development trends of the wind power industry in the future, and will also become one of the major increases in the market demand of the midstream wind turbine blade industry. Compared with onshore wind power, offshore wind power has the characteristics of high stability, high wind speed and easy consumption. Offshore wind speeds are typically 20% higher than onshore, and there are fewer quiet periods of wind, allowing for longer power generation. Therefore, offshore wind power has the prospect of large-scale development in the future, which will drive the new demand for wind turbine blades.

This report studies the global Offshore Wind Turbine Blade production, demand, key manufacturers, and key regions.
