## Abstracts

The global Offshore Workover Rig market size is expected to reach \$ 1244.9 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

In order to complete workover operations, workover rigs are needed. A workover rig mainly consists of lifting equipment (winches, derricks, etc.), loop flushing equipment (pumps and manifold systems, etc.), and rotating operation equipment (turntable, etc.). It is similar to an ordinary drilling rig. The operating load is relatively light, so the workover rig's power and other basic parameters, such as the volume, weight, and so on, are relatively smaller than the drilling rig. Though offshore workover rigs are similar to drilling rigs in composition, the installation is different at sea.

This report studies the global Offshore Workover Rig production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Offshore Workover Rig, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
