According to our (Global Info Research) latest study, the global P2Y12 Antagonists market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

P2Y12 antagonists are a class of drugs that inhibit the function of the P2Y12 integrin receptor, which is primarily found on platelets and plays a critical role in platelet aggregation and blood clot formation. By blocking this receptor, these antagonists effectively reduce platelet activation and aggregation, making them valuable in the prevention and treatment of thromboembolic disorders, such as acute coronary syndrome and during percutaneous coronary interventions. Commonly used P2Y12 antagonists include drugs like abciximab, eptifibatide, and tirofiban.
