The oil absorption measuring device is a test device specially used to evaluate the material's ability to absorb oil liquids. It is widely used in the fields of petrochemicals, environmental emergency response, industrial manufacturing and new material research and development. The device simulates the process of material contact with oil products in the actual use environment, accurately measures the weight change of oil absorbed by the material per unit time, and thus calculates its oil absorption or oil absorption rate. High-end oil absorption measuring devices usually have high-sensitivity sensors, temperature control systems and automatic data acquisition and analysis functions to ensure the accuracy and repeatability of test results.
