## Abstracts

According to our (Global Info Research) latest study, the global Oil Bath Air Filter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Oil bath air filter is a type of industrial air filter. It is characterized by using oil (engine oil, diesel, etc.) as the filter medium to filter out impurities and dust in the air.

The working principle of the oil bath air filter is to use oil as the filter medium to adhere impurities and dust in the air to the oil surface, so that the air can be purified. When the air enters the oil bath air filter, it will first pass through the swirl guide blades and the packing filter layer to filter out larger particle impurities in the air. Then, the air will enter the oil chamber and impact and fluctuate with the oil surface, causing the air to get an oil bath. During this process, tiny dust and impurities in the air are adhered to the oil and thus filtered out.

The advantages of oil bath air filters are simple structure, easy maintenance, and low cost. However, because it uses oil as the filter medium, it is prone to oil stains and odors, and requires regular replacement of the filter medium and cleaning equipment.
