According to our (Global Info Research) latest study, the global Oil Condition Monitoring market size was valued at US\$ 903 million in 2025 and is forecast to a readjusted size of US\$ 1659 million by 2032 with a CAGR of 9.2% during review period.

Oil analysis provides a detailed view of what is happening within machine components during operation. For decades, oil analysis has helped diagnose the internal conditions of oil-wetted components and their lubricants in virtually every industry that involves heavy duty machinery or stationary industrial equipment. Any company that operates equipment using oil, fuel or coolant can realize substantial returns from a minimal investment in this type of testing. While early oil analysis test methods were shockingly simple, present-day processes employ the most advanced analytical tools and technologies. Commercial oil analysis uses a combination of physical and chemical tests to monitor lubricant and component conditions – much like what we learn when testing blood samples from people. Oil condition monitoring (OCM) testing predictive maintenance programs help clients avoid costly machinery, engine and power-train failures.

Global Oil Condition Monitoring key players include Bureau Veritas, SGS, Intertek Group, Shell, Chevron Corporation, etc. Global top five manufacturers hold a share about 70%. Europe is the largest market, with a share about 40%, followed by North America, with a share about 30 percent. In terms of product, Off-site is the largest segment, with a share about 75%. And in terms of application, the largest application is Oil & Gas, followed by Transportation, Industrial, Energy & Power, Mining, etc.
