## Abstracts

According to our (Global Info Research) latest study, the global Neutron Detection Equipment market size was valued at USD 143.7 million in 2023 and is forecast to a readjusted size of USD 179.9 million by 2030 with a CAGR of 3.3% during review period.

Neutron detectors consist of materials that interact with neutrons. Although the principle reaction mechanisms of neutrons with matter are limited, the options for detection media are quite numerous. Detectors can consist of solid, liquid, or gas-filled media. Beside the detection mechanism, there is one major challenge for all types of neutron detectors. They all need to be insensible to gamma ray emission or at least require an implemented technique to discriminate between neutron and background gamma ray events, as neutron detection often takes place in a mixed radiation field.

The global top three neutron detector manufacturers include Photonis, Arktis Radiation Detectors, Thermo-Fisher Scientific, with a total market share of more than 40%, of which the largest manufacturer is Photonis, with a market share of more than 18%. The Americas is the global leading consumer market for neutron detectors, with a market share of over 35%. In terms of type, gas proportional detectors have a market share of over 75%. In the application field, the market share of the homeland security field accounts for more than 60%.

The Global Info Research report includes an overview of the development of the Neutron Detection Equipment industry chain, the market status of Nuclear Power (Lithium Large-Area Neutron Detector, Fast Neutron Detectors), Aerospace & Defense (Lithium Large-Area Neutron Detector, Fast Neutron Detectors), and key enterprises in
