According to our (Global Info Research) latest study, the global Oil Diffusion Pumps market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An oil diffusion pump is a type of fluid-entrainment pump that produces high vacuum by operating with a fast-moving stream of pump fluid in vapor form. The pump is operated with an oil of low vapor pressure, which is heated by an electrical heater vessel to generate a high-speed jet. The oil vapor expands after passing through the jet stack nozzles, and transports gas molecules from the inlet to the exhaust. The oil is gaseous when entering the nozzles, and the flow changes from laminar to supersonic and molecular within the nozzles.
