## Abstracts

The global Oil Drilling Equipment Derrick market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oil derricks are load-bearing structures used to support and position a drill string over an oil well. They are considered permanent structures and are typically used in offshore drilling applications. Most derricks take the form of a tall tower which extends above drilling operations. A crown block, the stationary section of a block and tackle, sits on top of the derricks connecting the load of the drill string to the support structure.
