According to our (Global Info Research) latest study, the global Oil Filled Radiator Heater market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer market of Oil Filled Radiator Heater is North America and Europe. With the gradual recovery of the global economy after the COVID-19 pandemic and the return of major economies to normal, there will be some growth in the manufacturing sector. Under the common influence of the war between Russia and Ukraine and the energy crisis, consumers in Europe and America put forward new requirements for heating equipment. As a result, the demand for Oil Filled Radiator Heater will vary within predictable times.

The oil filled radiator heater is a type of electric heater that uses oil as a heat reservoir. The oil is heated by an electrical element, and then the heat is transferred from the oil to the metal fins of the radiator. The fins then radiate the heat into the surrounding air, warming up the room. Because the oil retains heat well, even after the unit is turned off, these heaters can continue to provide warmth for some time without using electricity. They are often used as a supplemental heating source in homes or offices, but they can also be used as a primary heat source in smaller spaces.
