According to our (Global Info Research) latest study, the global Oil Fired Boiler Burner market size was valued at US\$ 529 million in 2025 and is forecast to a readjusted size of US\$ 836 million by 2032 with a CAGR of 6.9% during review period.

In 2025, global production of oil-fired boiler burners reached approximately 190,000 units, with an average selling price of \$2,705 per unit. An oil fired boiler burner is a combustion device designed to atomize liquid fuel, mix it with air in precise proportions, and ignite the mixture to generate a stable flame within a boiler's combustion chamber. Applicable fuels range from light distillate oils - and blends thereof with liquid biofuels - to higher-boiling-point petroleum fuels that require preheating to achieve effective atomization. The core technical focus lies in the quality of fuel atomization, air-to-fuel ratio control, ignition safety, and combustion stability. Applications span both steam boilers and hot water boilers, serving sectors such as manufacturing (for process steam), food processing, chemical production, public utilities, commercial heating, and select residential heating and hot water systems. The upstream segment primarily encompasses components and materials such as fuel oil, nozzles, oil pumps, blowers, electric motors, igniters, flame detectors, control units, valves, housings, and burner head materials; the midstream segment involves burner design, assembly, commissioning, and certification; while the downstream segment connects to steam boilers, hot water boilers, thermal fluid heaters, heat exchangers, and associated heating or process systems. Gross margins typically range from approximately 18% to 30%.
