The global Oil-Free Centrifugal Air Compressor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oil free centrifugal air compressor is a special type of air compressor that adopts the principle of centrifugal compression and does not require the use of lubricating oil for lubrication and sealing. It compresses the air through a high-speed rotating centrifugal shaft and then exhausts the compressed air. The main characteristics of oil-free centrifugal air compressors include: 1 No need for lubricating oil: Due to the principle of centrifugal compression, oil-free centrifugal air compressors do not require the use of lubricating oil for lubrication and sealing, avoiding problems of oil pollution and oil filter replacement. 2. Efficient and energy-saving: The oil-free centrifugal air compressor has efficient compression efficiency and can provide stable high pressure and high flow compressed air output. Meanwhile, due to the absence of lubricating oil, energy loss and maintenance costs are reduced. 3. Reliable and stable: The oil-free centrifugal air compressor adopts advanced design and manufacturing technology, which has stable and reliable operating performance and long service life. 4. Environmental protection and energy conservation: As oil-free centrifugal air compressors do not produce oil pollution, they meet environmental requirements and are suitable for applications with high air quality requirements. Oil free centrifugal air compressors are widely used in fields that require high-quality, oil free compressed air, such as food processing, pharmaceuticals, electronics, textiles, medical and other industries. They are also commonly used for industrial applications with high air quality requirements and air supply in special environments.
