Abstracts

According to our (Global Info Research) latest study, the global Oil & Gas Defoaming Separator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

During oil & gas production, crude oil is brought to surface by applying pressure through the tubing. After production, pressure is reduced, which separates the gas bubbles from the fluid and subsequently results in the formation of foam on the surface. This foam, if not treated, will cause problems during the transportation of oil & gas at atmospheric pressure. To stabilize the foam, certain additives are added or defoaming separators are used, i.e. chemical or physical defoaming is carried out.

The Middle East, followed by Asia Pacific, is a major market for the oil & gas defoaming separator market. Oil & gas refinery capacity is increasing in APAC, especially in China, India and ASEAN countries, owing to which the demand for defoaming separators is expected to increase over the forecast period. Further, the increasing production of oil & gas in North America and Europe will help drive the demand for oil & gas defoaming separators over the forecast period.
