Abstracts

According to our (Global Info Research) latest study, the global Oil & Gas Wire Rope market size was valued at US\$ 2318 million in 2024 and is forecast to a readjusted size of USD 2674 million by 2031 with a CAGR of 1.9% during review period.

Steel wire rope for oil and gas industry is a kind of high-strength steel wire rope specially designed for oil and gas exploration, drilling, mining and transportation operations. It is widely used in drilling rig lifting system, wellhead operation, offshore platform hoisting and pipeline laying. It is usually made of high-carbon steel wire strands, and is galvanized, lubricated or anti-corrosion coated to enhance wear resistance, tensile strength and fatigue resistance, and adapt to extreme temperature, high humidity, high corrosion and other harsh environments. The steel wire rope has excellent load-bearing capacity and service life, ensuring the efficient and safe operation of oil and gas industry equipment.

After experiencing the impact of the epidemic and oil price fluctuations, the global oil and gas wire rope market is entering a structural growth cycle with the recovery of the oil and gas industry and the restart of deepwater exploration activities. The core driving force on the demand side comes from the acceleration of deepwater oil and gas field development under the global energy security strategy (such as the Brazilian subsalt layer, the Gulf of Mexico and the West African waters), the recovery of shale oil/gas production (unconventional resources on land in North America, the Middle East and China), and technological breakthroughs in exploration in extreme environments such as the Arctic. Among them, the growth rate of deep-sea drilling wire rope demand is significantly higher than that on land. In terms of regional distribution, North America (shale revolution technology spillover), the Middle East (conventional oil and gas

production increase), Latin America (Brazil subsalt oil field development) and Asia-Pacific (South China Sea, Indonesian deep sea) are the main growth poles, and Russia and Central Asia are relatively lagging due to geopolitical conflicts and sanctions restrictions.

Technology upgrades and material innovation are the core driving forces of market evolution. In order to cope with the challenges of ultra-deep wells (>3000 meters), high temperature and high pressure (HPHT) and extremely cold environment operations, steel wire ropes are iterating towards ultra-high strength (above 2160MPa) and corrosion resistance (zinc-nickel alloy coating, stainless steel stranding). Supply chain resilience becomes a key variable - on the raw material side, the price of high-carbon steel wire is significantly affected by the pricing power of iron ore giants and the fluctuation of coking coal costs. The Russian-Ukrainian conflict in 2023 exacerbated the disorder of the European special steel supply chain; geopolitical risks (such as obstruction of Red Sea shipping) pushed up delivery cycles and logistics costs, forcing manufacturers to accelerate regional capacity layout.

In the next decade, market growth will still be supported by deepwater exploration investment and demand for old oil fields, but we need to be vigilant about three major risks: first, the sharp fluctuations in international oil prices will lead to a contraction in capital expenditures (such as the economic pressure of deepwater projects when oil prices are below US\$60/barrel); second, the long-term substitution effect of new energy such as hydrogen energy on traditional oil and gas demand; third, the frequent occurrence of extreme climate (such as hurricanes and sea ice) on the offshore operation cycle. Enterprises need to build differentiated competitiveness through innovation on the material side and cooperation with oil service giants (Schlumberger and Baker Hughes).
