According to our (Global Info Research) latest study, the global Oil-impregnated Insulation Cardboard market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Oil-impregnated insulating paperboard is an insulating material with excellent electrical and mechanical properties, which is formed by using insulating paperboard (usually made of unbleached kraft wood pulp as raw material and made by sticky pulping) as the base material and infiltrating insulating oil (such as transformer oil, etc.) into the pores of the paperboard through an impregnation process. This treatment method utilizes the complementary effects of insulating oil and paperboard, making the oil-impregnated insulating paperboard perform well in dielectric properties, heat resistance, durability, etc.

Oil-impregnated insulating paperboard is widely used in power equipment and electronic manufacturing industries, especially as the main insulating material in key components such as oil-immersed transformers, cables, capacitors, etc. Its excellent electrical and mechanical properties provide a strong guarantee for the safe operation of power equipment.
