According to our (Global Info Research) latest study, the global Oil Manifold Plate market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The oil manifold plate (manifold block) is used to install plate hydraulic valves, and holes are drilled in the plate to ensure that the flow channels of each valve can communicate correctly according to the designed principle. The hydraulic oil circuit board, also known as the hydraulic valve block, is mainly used to integrate and connect various hydraulic parts to facilitate search, maintenance, and debugging. The parts drawing of the hydraulic oil circuit board includes the overall dimensions, the size and position of each oil hole, the installation and fixing method, and the technical requirements, etc.
