The global Oil Mist Extraction System market size is expected to reach \$ 194.4 million by 2029, rising at a market growth of 3.1% CAGR during the forecast period (2023-2029).

The Oil Mist Extraction System market plays a pivotal role in industrial workplaces, particularly in manufacturing, machining, and metalworking industries, where the production processes generate oil mist or coolant mist. These systems are essential for maintaining a safe, clean, and healthy working environment by efficiently capturing and removing harmful oil mist particles and fumes, which can pose health risks to workers and damage machinery. The market is driven by stringent occupational health and safety regulations that mandate the control and elimination of airborne contaminants. Oil Mist Extraction Systems offer a cost-effective solution to address these concerns, protecting workers from inhalation hazards while also preventing oil mist from settling on surfaces and equipment, potentially leading to safety hazards and reduced operational efficiency. As the importance of worker health and safety grows, the Oil Mist Extraction System market continues to evolve, incorporating advanced filtration technologies and intelligent monitoring systems to provide efficient and sustainable solutions for a variety of industrial applications.
