Abstracts

The oil and gas pipeline corrosion protection system is the basic guarantee to ensure the long-term safe operation of the pipeline. With the strengthening of the country's supervision on the safety of oil and gas pipelines, oil and gas pipeline corrosion detection has become an important link and technical means for pipeline safety protection. Corrosion runs through the entire life cycle of steel pipelines and is one of the main causes of oil and gas pipeline failure accidents. Regularly carry out corrosion inspections on pipelines, timely and accurately discover corrosion defects, and take corresponding control, maintenance, and replacement measures, which can effectively reduce the probability of corrosion accidents. MIC testing can effectively detect oil and gas pipeline problems and avoid greater losses.
