## Abstracts

Oil-paper insulated submarine cables (OPISC) are a type of underwater cable used for transmitting electrical power over long distances beneath bodies of water. They are constructed with a combination of oil-impregnated paper insulation and other materials to provide electrical insulation and mechanical protection. OPISC typically consists of several layers. The core of the cable contains one or more conductors made of copper or aluminum, which carry the electrical power. These conductors are surrounded by multiple layers of insulating materials, including oil-impregnated paper, which provides excellent electrical insulation properties.
