Abstracts

The global Oil Rotary Vane Pump market size is expected to reach \$ 644 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global oil rotary vane pump production reached approximately 56 k units, the average price is 7800 usd/unit. Oil rotary vane pumps are medium-low vacuum positive displacement pumps sealed with oil. The rotor is eccentrically mounted inside the pump chamber, and the vanes in the slots adhere to the inner wall of the stator by centrifugal force. As the rotor rotates, the volume on the inlet side decreases from large to small, compressing the gas and discharging it from the exhaust valve. The pump oil simultaneously plays the roles of sealing, lubrication, and cooling. The ultimate vacuum of a single unit is usually in the range of 10⁻² Pa. It is often connected in series with a Roots pump or a molecular pump as a backing stage.

The gross profit margin of oil rotary vane pumps is around 25%.

This report studies the global Oil Rotary Vane Pump production, demand, key manufacturers, and key regions.
