Abstracts

Oil sands, also known as 'tar sands,' are sediments or sedimentary rocks composed of sand, clay minerals, water, and bitumen. The oil is in the form of bitumen, a very heavy liquid or sticky black solid with a low melting temperature. Bitumen typically makes up about 5 to 15% of the deposit. Most of the world's oil sand resources are located in Alberta, Canada. The Alberta Energy and Utility Board estimates that these contain about 1.6 trillion barrels of oil - about 14% of all of the world's total oil resource. The largest deposit is the Athabasca Oil Sands.

This report studies the global Oil Sands production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Oil Sands, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2021 as the base year. This report explores demand trends and competition, as well as details the characteristics of Oil Sands that contribute to its increasing demand across many markets.
