The global Oil Storage Base market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oil storage base refers to a large oil depot base specially used for long-term storage of crude oil. These bases are usually located in oil fields, ports or other strategic locations and are used to store crude oil, refined products, petroleum products, etc. shipped from oil fields or importing countries. The main functions of the oil storage base include storage, dispatching, distribution and management of oil resources to meet supply demand and market fluctuations. Oil storage facilities within the base usually include storage tanks, pipelines, pumping stations, gas stations and other equipment used to store, transport and process petroleum products. Through oil storage bases, the oil supply chain can operate more efficiently, ensuring the supply of petroleum products and market stability.
