The global Oil Surge Relay (OSR) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oil Surge Relay (OSR) is a device used to protect and control transformers. It is a mechanical relay widely used in large power transformers. Its function is to monitor the vibration and liquid level changes of the oil pool of the transformer. When the threshold is reached, it will trigger the corresponding protection action. These actions may include shutting off the power supply to the transformer, triggering an alarm or alarm system, or activating other protective devices to limit oil oscillations.
