Abstracts

The global Oil Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oil transformer is one of the important equipment in the power supply and distribution system of industrial and mining enterprises and civil buildings. This kind of product is suitable for AC 50 (60) Hz, three-phase maximum rated capacity 2500kVA (single-phase maximum rated capacity 833kVA, generally not recommended to use single-phase transformer), can be used indoors (outside), the capacity of 315kVA and below can be installed on the pole, the ambient temperature is not higher than 40 ° C, not lower than -25 ° C. The maximum daily average temperature is 30?, the maximum annual average temperature is 20?, the relative humidity is not more than 90% (ambient temperature is 25?), and the altitude is not more than 1000m. Transformer oil is a petroleum liquid, which has the possibility of combustion and has disadvantages in environmental protection. However, due to the characteristics of transformer oil with excellent performance and low price, the vast majority of power transformers still use transformer oil as insulation and cooling media. Can be divided into three phase transformer and single phase transformer. In the three-phase power system, three-phase transformers are generally used, and when the capacity is too large and limited by transportation conditions, three single-phase transformers can also be used in the three-phase power system to form a transformer group.

This report studies the global Oil Transformer production, demand, key manufacturers, and key regions.
