An Oil-Water Separator is a device designed to separate oil from a liquid mixture of oil and water. It is commonly used to extract oil from factory wastewater or to recover valuable liquids that cannot be easily disposed of. The main types of Oil-Water Separators are emulsion separation and oil-water separation, where emulsion refers to a state where oil and water are thoroughly mixed.

These separators play a vital role in various industries, offering several types of separation based on the oil's condition, the removal target, and the desired purity level, thus reducing environmental impact and operational costs.
