According to our latest research, the global Oil Well Derrick market size will reach USD 9056 million in 2031, growing at a CAGR of 3.4% over the analysis period.

Oil derricks are load-bearing structures used to support and position a drill string over an oil well. They are considered permanent structures and are typically used in offshore drilling applications. Most derricks take the form of a tall tower which extends above drilling operations. A crown block, the stationary section of a block and tackle, sits on top of the derricks connecting the load of the drill string to the support structure.
