Commonly used stimulation techniques are 1) acidizing and 2) fracturing. Oil and natural gas stimulation differs-- natural gas wells require stimulation roughly twice as often as oil wells.

Scope of the Report:

This report focuses on the Oilfield Fracturing Chemicals in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. From 2012 to 2014, North American shale gas production showed a sharp rise, which led to a substantial increase in oilfield chemical company's revenue. From 2014-2016, almost all of the oilfield chemical company's revenues have experienced various degrees of decline due to weak demand of shale gas. Hydraulic fracturing continues globally, but primarily in North America. While hydraulic fracking grew during 2011–14, with lowered crude oil pricing, it is showed that consumption declined by 36% in 2015. In 2017, the global oilfield chemical industry began to pick up.

The worldwide market for Oilfield Fracturing Chemicals is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
