## Abstracts

According to our (Global Info Research) latest study, the global OIS Camera Modules market size was valued at US\$ 19797 million in 2025 and is forecast to a readjusted size of US\$ 37379 million by 2032 with a CAGR of 9.5% during review period.

In 2025, global OIS camera module output reached about 1.6 billion units, with 2.1 billion units in annual capacity. The average unit price is around USD 12, and gross margins are approximately 28%. OIS (Optical Image Stabilization) camera modules are integrated imaging units used in smartphones, tablets, automotive cameras, and other portable electronics that incorporate a lens-shift or sensor-shift stabilization mechanism to compensate for hand shake or motion blur in real time. An OIS module typically consists of the CMOS image sensor, lens stack, voice coil motor (VCM) or MEMS actuator for stabilization, gyroscope sensors, flexible printed circuits (FPC), driver ICs, and precision mechanical housing. The supply chain begins upstream with semiconductor manufacturers producing CMOS image sensors and driver ICs, rare-earth magnet and copper coil suppliers for VCM actuators, precision glass/plastic lens makers, and MEMS gyroscope producers; midstream involves actuator manufacturing, lens assembly, and module integration by camera module specialists; downstream, the fully assembled OIS camera modules are supplied to smartphone OEMs, automotive Tier-1 suppliers, AR/VR device makers, and other consumer electronics brands, where they are integrated into end devices and calibrated through software algorithms for image stabilization performance.
