OLED Color Filter is a type of technology used in OLED (Organic Light Emitting Diode) displays. The color filter is a thin film that is placed on top of the OLED panel and is responsible for producing the colors that are visible on the screen. The OLED Color Filter technology is designed to improve the color accuracy and brightness of OLED displays, making them more vibrant and lifelike.

### Upstream Industry Chain:

The upstream industry chain of OLED Color Filter includes the production of raw materials such as organic materials, inorganic materials, and substrates. The production of these raw materials requires specialized equipment and processes, which are typically provided by equipment manufacturers. The raw materials are then processed into OLED panels, which are used in the production of OLED displays.

### Downstream Industry Chain:

The downstream industry chain of OLED Color Filter includes the production of finished products such as televisions, smartphones, and other electronic devices that use OLED displays. These products are typically manufactured by original equipment manufacturers (OEMs) or contract manufacturers, who source the OLED panels from

panel manufacturers.
