According to our (Global Info Research) latest study, the global OLED Mask Tension Machine market size was valued at US\$ 36.58 million in 2025 and is forecast to a readjusted size of US\$ 138 million by 2032 with a CAGR of 21.2% during review period.

FMM is mainly made of materials with extremely low thermal deformation coefficient, which is the key to defining pixel precision. After the production, the FMM is accurately positioned on the metal frame by the Mask Tension Machine and sent to the evaporation section. Under ultra-high vacuum, the evaporation machine evaporates the organic material through the FMM onto the limited area of the LTPS substrate. After the evaporation is completed, the LTPS substrate is sent to the packaging section, where it is bonded to the protective plate with high-efficiency glass glue that blocks water vapor in a vacuum environment.

The largest global market for OLED Mask Tension Machine is Asia-Pacific, and has a share about 93%. In terms of product type, OLED is the largest segment, accounting for a share of 96%. In terms of application, Smart Phone is the largest field with a share about 83 percent.
