## Abstracts

According to our (Global Info Research) latest study, the global OLED Panel market size was valued at USD 143 million in 2023 and is forecast to a readjusted size of USD 181.7 million by 2030 with a CAGR of 3.5% during review period.

Organic light emitting diodes (devices) or OLEDs are monolithic, solid-state devices that typically consist of a series of organic thin films sandwiched between two thin-film conductive electrodes. When electricity is applied to an OLED, under the influence of an electrical field, charge carriers (holes and electrons) migrate from the electrodes into the organic thin films until they recombine in the emissive zone forming excitons. Once formed, these excitons, or excited states, relax to a lower energy level by giving off light (electroluminescence) and/or unwanted heat.

Global OLED Lighting Panels key players include LG Display, OLEDWorks, Sumitomo Chem, Lumiotec, etc. Global top four manufacturers hold a share over 80%.

Japan is the largest market, with a share about 30%, followed by China, and Europe, both have a share over 40 percent.
