Abstracts

The global OLEDoS Display market size is expected to reach \$ 10720 million by 2029, rising at a market growth of 54.5% CAGR during the forecast period (2023-2029).

From the perspective of virtual reality display technology, after 2018, the emergence of Fast-LCD technology has made LCD gradually become the mainstream choice for AR/VR devices. From 2022, the display scheme will be further iterated, and industry leaders will begin to use Fast-LCD display panels with Mini LED backlights, or use Micro OLEDs to improve display performance. At present, most AR/VR devices still use LCD solutions. Driven by the development of the AR/VR industry and the improvement of performance requirements, the market size of Micro OLED display panels is expected to expand rapidly.

OLEDoS displays also called Micro OLED, are silicon-based OLED display that use a monocrystalline silicon wafer as the actively driven backplane, so it is easier to achieve high PPI (pixel density), a high degree of integration, and small size. This ensures they are easy to carry, have good anti-seismic performance, and have ultra-low power consumption. Micro OLED displays are particularly suitable for AR and VR wearables.

This report studies the global OLEDoS Display production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for OLEDoS Display, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
