## Abstracts

According to our (Global Info Research) latest study, the global Olefins market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Olefins are some of the most important building blocks or raw materials for several key chemical products and intermediates. Olefins are mainly produced by cracking of crude oil, naphtha or natural gas. Olefins are used to manufacture several key plastics, polymers and resins such as Polyethylene, Polypropylene. Examples of olefins include, ethylene, propylene and butadiene.

Companies have started using Roto Dynamic Reactor Technology due to its energy efficiency. This is an innovative olefin cracking technology invented in 2017 and improves the olefin production with lesser energy consumption. This hydrocarbon cracking method based technology, saves non-renewable resources and reduces impurity generation from ethylene cracking.

The Global Info Research report includes an overview of the development of the Olefins industry chain, the market status of Manufacture (Ethylene, Propylene), Industrial (Ethylene, Propylene), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Olefins.

Regionally, the report analyzes the Olefins markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global Olefins market, with robust domestic demand, supportive policies, and a strong manufacturing base.
