According to our (Global Info Research) latest study, the global Oleuropein market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Oleuropein is a phenylethanoid, a type of phenolic compound found in olive leaf from the olive tree together with other closely related compounds such as 10-hydroxyoleuropein, ligstroside, and 10-hydroxyligstroside.

On the basis of Application, the market is segmented into Food and Drink, Pharmaceutical Industry, Cosmetics, and Others.

Eating oleuropein-rich foods is one way to experience the health benefits of this phenolic compound. The antioxidant properties of oleuropein and its ability to kill cancer cells make it appealing for food manufacturers who are looking into natural, safer alternatives to synthetic preservatives. As a result, there has been an uptick in companies adding small amounts of olive leaves extract or puree as well as other plant extracts containing erythrocyanidins such as Grape Seed Extract and pomegranate extract.

Oleuropein is primarily seen use as an anti-inflammatory agent for the treatment of skin diseases such as acne but additionally has been used to treat respiratory conditions (particularly those involving cough).

Oleuropein is used in many beauty products such as Hair Care products, skincare lotions, and creams. It can be found in some sunscreens and has anti-inflammatory properties that help with acne. It also helps to protect the outer layer of skin from UV

radiation which helps prevent wrinkles and age spots.
