According to our (Global Info Research) latest study, the global Oligomeric High-Dispersion Silica for Green Tire market size was valued at US\$ 548 million in 2025 and is forecast to a readjusted size of US\$ 919 million by 2032 with a CAGR of 7.9% during review period.

In 2025, global production of oligomeric high-dispersion silica for green tires reached 367,000 tons, with an average selling price of US\$1,450 per ton. Oligomeric high-dispersion silica for green tires refers to oligomeric high-dispersion precipitated silica used in green tires and high-performance tire tread rubber systems. It is typically used in combination with silane coupling agents, S-SBR, and BR to reduce tire rolling resistance, improve wet grip, and maintain good wear resistance. It is mainly used in passenger car tires, EV tires, high-performance tires, and energy-saving tires for commercial vehicles. The upstream mainly includes quartz sand, soda ash, sulfuric acid, sodium silicate, energy, steam, electricity, and packaging materials; the midstream consists of silica manufacturers using the precipitated silica method, whose production process typically includes sodium silicate preparation, precipitation reaction, filtration and washing, drying, granulation, surface treatment, and packaging; the downstream mainly consists of tire manufacturers, with end-user demand coming from the passenger car, commercial vehicle, new energy vehicle, replacement tire, and original equipment tire markets. Gross profit margins range from approximately 20% to 40%.
