According to our (Global Info Research) latest study, the global Oligonucleotide market size was valued at USD 1290.3 million in 2023 and is forecast to a readjusted size of USD 2461.4 million by 2030 with a CAGR of 9.7% during review period.

Oligonucleotides are short nucleic acid polymers used in research, genetic testing and forensics.

Oligonucleotides are usually made up of 13 to 25 nucleotides and are designed to hybridize specifically to DNA or RNA sequences. Solid-phase clinical synthesis is used to manufacture these small bits of nucleic acid for use in polymerase chain reaction (PCR), DNA sequencing, library construction and artificial gene synthesis.

Oligonucleotide drugs have the advantages of high therapeutic efficiency, low drug toxicity, and strong specificity, and have great potential in the treatment of metabolic diseases, genetic diseases, cancer, and prevention of infectious diseases. In recent years, due to the unique advantages of oligonucleotides in regulating gene expression, the research and development, production and commercialization of their drugs have developed rapidly, and the global market has continued to expand.
