The global Omalizumab Biologic Injection market size is expected to reach \$ 129 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

Omalizumab Biologic Injection is a monoclonal antibody drug targeting immunoglobulin E (IgE), mainly used for the treatment of allergic asthma, chronic spontaneous urticaria, nasal polyps, and other IgE-mediated diseases. It works by binding to free IgE in the blood, thereby reducing allergic reactions and inflammation. Upstream of the industry chain mainly includes biotechnology raw materials, cell culture media, recombinant protein expression systems, bioreactor equipment, and contract development and manufacturing organizations (CDMOs). Midstream consists of biopharmaceutical companies producing original biologics and biosimilars, formulation manufacturers, fill-finish providers, and cold chain logistics companies. Downstream includes hospitals, specialty clinics, retail pharmacies, online pharmacies, and patients suffering from severe allergic or autoimmune-related conditions. With the growing prevalence of allergic diseases and the expansion of biologic therapies, the market demand for Omalizumab Injection continues to increase globally.
