Abstracts

The global Omalizumab Biosimilars market size is expected to reach \$ 606 million by 2032, rising at a market growth of 11.0% CAGR during the forecast period (2026-2032).

In 2025, global Omalizumab Biosimilars production reached approximately 909 k doses, with an average global market price of around US\$ 319 per dose. Gross margin is about 43%. The cost is 182 usd, the production is 1200 k doses. Omalizumab is a medication used to treat asthma, nasal polyps, and urticaria. Omalizumab is a recombinant DNA-derived humanized IgG1k monoclonal antibody that specifically binds to free human immunoglobulin E (IgE) in the blood and interstitial fluid and to membrane-bound form of IgE (mIgE) on the surface of mIgE-expressing B lymphocytes. Unlike an ordinary anti-IgE antibody, it does not bind to IgE that is already bound by the high affinity IgE receptor (Fc ϵ RI) on the surface of mast cells, basophils, and antigen-presenting dendritic cells.

The market is entering a rapid commercialization stage

As the first omalizumab biosimilars gain approval in major markets such as Europe and the United States, the market is shifting from development and regulatory preparation to commercialization and competition. More biosimilar manufacturers are expected to enter the market, accelerating adoption and increasing competition.

Price competition will become increasingly important

As more omalizumab biosimilars are launched, price competition is expected to intensify. Lower treatment costs will improve patient access and encourage hospitals, insurers, and healthcare systems to promote biosimilar substitution over the original

branded drug.

Interchangeability will become a key competitive advantage

In the United States, interchangeability status is likely to become an important factor influencing market share. Biosimilars with interchangeable designation may gain stronger acceptance from pharmacies, payers, and physicians because they can be substituted more easily for the original product.

More dosage forms and specifications will be introduced

Manufacturers are expected to launch additional dosage strengths, pre-filled syringes, auto-injectors, and patient-friendly packaging formats. Competition will increasingly depend on product portfolios, ease of administration, and compatibility with existing treatment practices.

Expansion of indications will increase long-term market potential

As the original omalizumab product continues to gain approvals for new indications such as food allergy, nasal polyps, and other IgE-mediated diseases, biosimilars are also expected to benefit from a larger addressable market in the future.
