## Abstracts

According to our (Global Info Research) latest study, the global Omnifocus Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Novascan full-focus detector is a full-featured phased array detection tool. In addition to phased array function and independent two-channel TOFD detection function, it is the first time at home and abroad to realize 3D full focus technology on a portable machine, and the imaging is clear and delicate; at the same time It supports million focus 2D total focus imaging (TFM) and full matrix data acquisition (FMC), which can display tiny defects more clearly.

Totally focused mode (TFM) ultrasound technology is another leap in complexity. Although Total Focusing Method (TFM) utilizes multi-element probe technology, it requires data collected through Full Matrix Capture (FMC). Full Matrix Capture (FMC) is a more comprehensive acoustic beam emission and reception strategy that generates an astonishing amount of data.
