Abstracts

According to our (Global Info Research) latest study, the global OMS Camera market size was valued at US\$ 105 million in 2025 and is forecast to a readjusted size of US\$ 190 million by 2032 with a CAGR of 5.0% during review period.

In 2025, global OMS camera production reached 2.5563 million units, with an average selling price of \$40 per unit. Global annual OMS camera production capacity is approximately 4 million units, with a gross profit margin of approximately 25.2%. OMS stands for Occupant Monitoring System. The OMS camera is the core component of this system, primarily responsible for real-time monitoring of passengers inside the vehicle. The upstream of the OMS camera industry chain includes image sensors and signal chains, optical components, and housing materials; the midstream consists of OMS camera manufacturers; and the downstream mainly comprises the commercial vehicle and passenger vehicle industries.

Currently, the OMS (Occupant Monitoring System) camera market is experiencing rapid growth. Key driving factors include increasing demands for automotive safety and intelligence, regulatory focus on child and occupant safety, and the application of big data and AI algorithms in scenarios such as behavior recognition, seat occupancy detection, and posture/sleep monitoring. Manufacturers are improving monitoring accuracy and privacy protection capabilities through high-resolution, low-power optical sensing, thermal imaging, and multimodal sensing (visual, infrared, depth) fusion. They are also increasing investment in in-vehicle system integration, edge computing, and data security to meet the demands for efficient, robust, and scalable commercial applications. As the market expands into high-end models and emerging markets, the application scenarios for OMS cameras will extend from simple seat occupancy detection to comprehensive solutions for fatigue, distraction monitoring, and safety

alerts.
