Abstracts

The global OMS Passenger Monitoring Camera market size is expected to reach \$ 190 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, the global production of OMS (Occupancy Monitoring System) cameras reached 2.5563 million units, with an average selling price of \$40 per unit. The global annual production capacity of OMS cameras is approximately 4 million units, with a gross profit margin of approximately 25.2%. OMS cameras are a core component of automotive occupancy monitoring systems, primarily used to monitor the status and behavior of passengers in the vehicle in real time. By capturing image information of passengers inside the vehicle and combining it with advanced image recognition algorithms, it can detect and analyze the number, location, actions, and physiological states of passengers (such as whether seat belts are worn, whether children are left behind, etc.), aiming to improve driving safety, optimize the passenger experience, and provide data support for the vehicle's intelligent interaction and safety protection functions. The upstream of the OMS camera industry chain includes image sensors and signal chains, optical components, and housing materials; the midstream consists of OMS camera manufacturers; and the downstream mainly includes the commercial vehicle and passenger vehicle industries.

This report studies the global OMS Passenger Monitoring Camera production, demand, key manufacturers, and key regions.
