According to our (Global Info Research) latest study, the global On-board Ethernet Physical Layer Chip market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

On-board Ethernet can not only support higher rate transmission, but also have large bandwidth, low delay and low electromagnetic interference

Disturbance and other advantages, as well as the normalization of the link connection form, reduce the vehicle link type and cost, and can be widely used in entertainment, ADAS, Internet of Vehicles and other systems. Therefore, on-board Ethernet is expected to gradually replace the traditional bus technology and become the next generation of on-board network architecture.

Ethernet circuit interface is mainly composed of data link layer (MAC) and physical layer (PHY). At present, most of the automotive processors have included MAC control, while Ethernet physical layer chip (PHY) is used as an independent chip to provide Ethernet access channel, which plays the role of connecting the processor and communication media.
