Abstracts

According to our (Global Info Research) latest study, the global On-Board Hydrogen Cylinder market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Hydrogen fuel cells store hydrogen gas in high-pressure cylinders, which are a very important part of fuel cells. As the core component of hydrogen fuel cell vehicles, the development level of hydrogen storage cylinders will directly determine the vehicle's endurance. Vehicle mounted high-pressure gaseous hydrogen storage cylinders mainly include aluminum inner liner fiber wound cylinders (Type III) and plastic inner liner fiber wound cylinders (Type IV). Vehicle mounted cylinders have characteristics such as limited volume, weight, special filling requirements, long service life, and variable usage environments. Therefore, lightweight, high pressure, high hydrogen storage mass ratio, and long service life are the characteristics of on-board hydrogen storage cylinders.
