According to our (Global Info Research) latest study, the global On-Chip Integrated Micro-lens Arrays market size was valued at US$ 1541 million in 2025 and is forecast to a readjusted size of US$ 2185 million by 2032 with a CAGR of 5.2% during review period.

CFAs are a mixture of tiny color filters placed over the individual pixels of an image sensor. Although the phototransistor generates an electric signal once it receives light, it does not produce any color image since it reacts only to light and dark. The color filter allows each pixel of the sensor to respond to a specific color. Toppan CFAs have a reputation for pristine color reproduction and high-quality fabrication.
