On-demand catering software is a type of software that provides businesses with a platform to order meals or other food from local restaurants on an as-needed basis. These solutions connect businesses with local food providers to create catering orders for large or small groups. This enables businesses to provide regular or occasional lunches for their employees or cater specific meetings or events quickly and easily, either in advance or day of. Unlike restaurant delivery/takeout software- which primarily facilitates the purchase of individual meals—on-demand catering software specifically provides meals for groups. Restaurants can integrate their chosen platform with a restaurant management system or restaurant POS to efficiently prepare and deliver orders.

The industry trend of on-demand catering software is expected to grow significantly in the coming years, as more businesses and consumers demand convenience, variety, and quality in their food delivery options. The factors driving the growth of this market include the increasing adoption of digital platforms for food ordering, the rising demand for personalized and customized menus, the growing popularity of cloud-based solutions, and the emergence of big data analytics technology to improve catering operations.
