## Abstracts

According to our (Global Info Research) latest study, the global On-demand Handyman App market size was valued at US\$ 128 million in 2025 and is forecast to a readjusted size of US\$ 181 million by 2032 with a CAGR of 5.0% during review period.

The On-demand Handyman App is a mobile internet-based instant service platform that connects community residents with various craftspeople. Users post scattered tasks such as repairs, installations, and unclogging through the app, and the system matches nearby professionals in real time based on location, skill tags, and user reviews. The platform features standardized service processes and pricing guidelines, and provides online payment, progress tracking, and completion acceptance functions to ensure transparent transactions and controllable services. Its core function is to efficiently match scattered offline repair needs with fragmented craftspeople's time, solving the pain points of traditional methods of finding odd jobs—limited channels, opaque pricing, and lack of after-sales support—and providing a convenient and reliable digital solution for daily home maintenance.

The on-demand Handyman App market is undergoing a profound transformation from simple information matching to a standardized service platform. Technically, LBS positioning technology enables real-time matching between users and nearby technicians; intelligent dispatch algorithms comprehensively consider technician skills, distance, positive review rates, and online status; in-app instant messaging and virtual number protection ensure communication efficiency and privacy; mobile payment and electronic contracts ensure closed-loop transactions and after-sales traceability. In terms of development trends, the platform is extending from single repair needs to full-scene home services, covering diversified categories such as cleaning, installation,

disassembly, and age-friendly renovations, and is beginning to explore pre-diagnosis via video consultation to reduce uncertainty in on-site visits. The main driving factors for development include the demand for housework outsourcing due to an aging population and the increase in dual-income families, the younger generation's consumption habits of instant response, and the rigid demand for repairs due to aging housing stock in the era of existing housing stock.
